A passionate full-stack developer with an inspired approach to aesthetics and functionality. I am a team player with proactive mindset and a meticulously detail-oriented approach to solving problems – an ethos that's been behind much of the success in my professional life. A hospitality background means the end-user is always on my mind, with intuitive and purposeful design at the vanguard of my development process.

skills

- React
- Node.js
- Ruby
- Git
- HTML
- CSS
- JavaScript
- Express
- Ruby on Rails
- GitHub
- MongoDB
- PostgreSQL

projects

CoLab

A full-stack application intended to unite users of various artistic media for unique collaborations. CoLab incorporates authentication, several tables with associations, and a dynamic, intuitive UI.

Built on an SQL database with *Ruby on Rails* and *React* frameworks.

ROOT

A full-stack application programmed in a team of four. Built to the specifications of a UX design prototype, implementing Agile methodology to render early iterations of a large-scale project.

Built using *MERN* stack architecture with *Git* collaboration.

Pop's Liquor Cabinet

A responsive and intuitive front-end mobile web application with full CRUD functionality, allowing users to dynamically update and interact with their home bar inventory.

Built in *React*, using *React Hooks*, *Axios*, and *Airtable*.

experience

2020

General Assembly

New York, NY

software engineering fellow

- Engineered full-stack applications using a variety of front and back-end frameworks and supplemental middleware
- Managed collaborative full stack team builds, implementing Git version control and Agile practices
